The Washoe County District Health advises that eating raw, undercooked animal foods, or animal foods that are not otherwise processed to eliminate pathogens, (such as meat, poultry, eggs, milk, seafood or shellfish) poses a potential health risk to everyone, especially the elderly, young children under the age of 4 years, pregnant women, and other highly susceptible individuals with compromised immune systems. Thorough cooking or processing of that food to eliminate pathogens reduces the risk of illness. Byproducts containing MSG (Monosodium Glutamate) may increase your risk of or cause certain allergic reactions especially if you have certain medical conditions.
