GREEN INITIATIVES

Our two-million-square-foot property is the only U.S. hotel to be heated completely by an on-site geothermal well. As the result of drilling the 4,400-foot well, the facility has reduced its CO2 emissions by 12,000 metric tons per year.

While the state-of-the-art geothermal system headlines our green initiatives, we have invested in making every facet of our operation more energy efficient and environmentally friendly. This combination of green initiatives makes the Peppermill Resort Spa Casino a leading example of environmental stewardship throughout the nation.

- Peppermill Resort Spa Casino invested over \$9.7 million in a complete overhaul of the existing geothermal system, including drilling new deep wells to handle heating 100% of the resort's domestic hot water, mechanical systems, pools and whirlpool tubs.
- Installation of over 40,000 square feet of artificial grass turf saves approximately 5,184,000 gallons of water per season and drastically reduces use of chemicals and pesticides.
- In 2018, the Peppermill invested in a major overhaul of its laundry facility. With the addition of Milnor PulseFlow CBW and various other facility upgrades, an additional 21,571,775 gallons of water and 8.9 billion BTUs of energy are saved each year.
- The property conserves 1.4 million kilowatt-hours (kWh) annually by replacing over four hundred 1000 watt fluorescent lightbulbs with 180 watt LED lightbulbs.
- The Peppermill has partnered with Clean the World, a nonprofit that collects, sorts and processes discarded soaps and shampoos and redistributes domestically and worldwide to children and families whose lives are threatened by poor hygiene. This year alone, the Peppermill will aid over 1,200 children and will divert over 12,000 pounds of soap and shampoo from local landfills.
- The installation of 30 plasma air generators and air purification units produces an all-natural bipolar ionization that significantly improves the air quality on the casino floor. These units neutralize odors, cigarette smoke, allergens, bacteria and airborne irritants and inhibit organic compounds found in carpet, furniture and cleaning agents. The Peppermill was recognized by the American Lung Association for air quality and purification efforts.
